

Reconciliation Bridge

Step	Description	Result	Reason
0	Naive communication-log count	30	We first counted all communication records for merchant 501 in October 2026. This gave us the starting count of 30.
1	Exclude non-finalized campaign 9004	26	Campaign 9004 was still waiting for approval, so it was not a finalized campaign. Its 4 records were removed from the count, leaving 26.
2	Deduplicate retry campaign chains	22	Some customers appeared more than once because of retry attempts. We counted the same customer only once within each retry campaign family. This reduced the count to 22.
3(final)	True target_base	22	After removing the invalid campaign and repeated retry entries, the final count is 22. This matches Finance's expected value.

- The **retry campaigns** have 19 send attempts in total, but some of them are for the same customer in the same campaign family. After removing these repeated entries, only 15 unique combinations remain. So, the retry campaigns contribute 15 sends.
- The **standalone campaign** has 7 sends, and all of them are counted separately, even if the same customer appears more than once.
- **Final count: $15 + 7 = 22$**
